

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-4 (Canceled).

Claim 5 (Currently Amended): A system comprising:

at least one automaton, said at least one automaton provided with a data-exchange function, said at least one automaton connected to at least one of a sensor or an actuator ~~sensors and/or actuators~~;

a communication line; and

a microcomputer connected to communicate with said at least one automaton through the communication line connected to a microcomputer input, said microcomputer comprising an automaton interface driver, an operating system, and a spreadsheet program, wherein said automaton interface driver cooperates with the operating system to provide commands from said spreadsheet program and to receive data from said at least one automaton through said communication line and microcomputer input.

Claim 6 (Currently Amended): The system recited in Claim 5, wherein said at least one automaton comprises remote inputs/outputs, and said at least one of a sensor or an actuator ~~sensors and/or actuators~~ connected to said at least one automaton are configured to communicate data to the communication line and is configured to receive at least one of a microcomputer command ~~commands and/or~~ or a data from the microcomputer via the communication line.

Claim 7 (Currently Amended): The system recited in Claim 5, wherein said automaton interface driver emulates the proprietary language for at least one of a the control function, a dialog function, a parameterizing function or a and/or dialog and/or parameterizing and/or program download function functions of said at least one automaton.

Claim 8 (Previously Presented): The system recited in Claim 5, wherein said at least one automaton further comprises memory operatively arranged to store a characteristic of operation of said at least one automaton.

Claim 9 (Previously Presented): The system recited in Claim 5, wherein said spreadsheet program is dynamically associated with at least one other program, said system further comprising means for processing said data received from said at least one automaton by said at least one other program.

Claim 10 (Previously Presented): The system recited in Claim 5, wherein said automaton interface driver organizes spreadsheet program commands into messages for transmission to said at least one automaton.
